

## Year 5 Spring 1 Computing: Networks

### Hard Drive

The job of the hard drive is to store all of the information and files on a computer.

### Motherboard

This is the circuit board that connects up all the different devices and passes information between them all.

## Don't forget...

Computers, digital devices and the Internet are wonderful things that can make our life easier, however, if you see something that makes you worried or upset then you should take a screenshot where possible and **tell a trusted adult.**

### Social Media

Did you know that you should be at least 13 years old to use most social media sites?

### The World Wide Web

The World Wide Web is a collection of digital pages containing text, images and videos. It is accessed using the internet and was invented by Tim Berners-Lee in 1989.

**W**e should always send messages that are friendly.  
**E**nsure you treat others online how you would like to be treated.  
**M**ake sure you never meet up with somebody you have never met before in real life.  
**S**hut the laptop lid or turn off the monitor if you see something you don't like online, then tell an adult immediately.  
**A**vatars are better to use online than personal photographs of you.  
**F**riend requests should only be accepted from people you know.  
**E**veryone's personal information is private. Don't share yours online.

### Internet

A large network of computers and devices all over the world.

### Collaborating

Working with other people on the same project.

### Computer Network

How computers communicate with each other.

### Netiquette

The way in which we behave when online.
